QA Engineer - JD

The Quality Assurance (QA) engineer will be responsible for developing and executing manual and automated tests to ensure the quality of data pipelines, products, and services.

Responsibilities:

- Review requirements, specifications, and technical design documents to provide timely and meaningful feedback
- Create detailed, comprehensive, and well-structured test plans and test cases
- Estimate, prioritize, plan and coordinate testing activities
- Design, develop and execute automation scripts using open-source tools
- Identify, record, document thoroughly, and track bugs
- Perform thorough regression testing when bugs are resolved
- Develop and apply testing processes for new and existing products to meet client needs
- Liaise with internal teams (e.g. developers and product managers) to identify system requirements
- Monitor debugging process results
- Investigate the causes of non-conforming software and train users to implement solutions
- Track quality assurance metrics, like defect densities and open defect counts
- Stay up-to-date with new testing tools and test strategies.

Required skills:

- 3-4 years of experience in Automation and Manual Testing
- Selenium (Must Have)
- Python (good to have)
- Understand Requirements and Write Test cases
- Good Communication skills.
